

Transplant, the Sequel

This story is the follow up of the book, The Transplant. by Dave Simpson. It is suggested by the author that you read that book first as this follow up will allow you to see what kind of a life followed for the recipient of the new brain. In Vancouver, Canada in the year twenty seventy five a brilliant young neurosurgeon successfully transplanted a healthy brain from a dying female hit and run victim into a woman with an unhealthy brain, this had never been done before. As you can imagine or maybe you cant, problems result from the transplant. The problem is not physical, it is psychological and this type of problem will leave psychologists absolutely baffled. There is nothing in the text books about this as it has never been encountered before. Can they cure the problem in time before all hell breaks loose or is it too late? Only time will tell and theres not much of it left!
